

# X1's Enterprise Preservation and Collection Platform Integrates Directly with RelativityOne Collect for a Complete End-to-End Solution

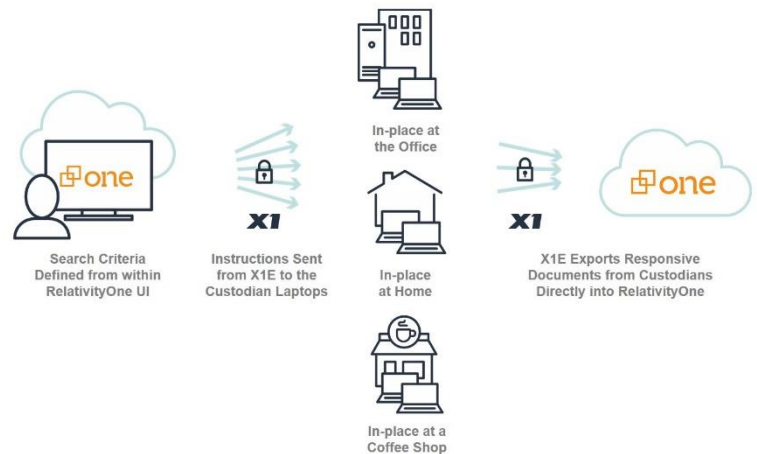

With the integration of X1's Enterprise eDiscovery collection platform into Relativity's RelativityOne Collect, organizations are empowered with the ability to remotely collect ESI on employee laptops, on company servers and in cloud repositories and applications and review and export directly from RelativityOne Collect for a seamless workflow experience. This integrated solution enables organizations globally to take advantage of immediate pre-collection visibility into their critical data with targeted and efficient search and collection, saving both time and money and eliminating the need for expensive, time-consuming and cumbersome ESI processing tools.

X1's Enterprise platform and RelativityOne provide the flexibility that corporations, outside counsel and service providers need to address multiple cases at diverse volume levels consistently and effectively. The combined solution addresses today's requirements and offers a modern and performant user experience to customers across the globe – taking the time needed for document review from months or weeks down to hours or a few days.

*“The ability to collect directly from custodian laptops and desktops into a RelativityOne workspace without impacting custodians is a game-changer. The ability to reduce collection times from weeks to hours so that attorneys can quickly begin reviewing and analyzing ESI in RelativityOne will drastically expedite eDiscovery workflows, saving time and money.”*

Marc Zamsky  
CEO of Compliance

## How the X1 Enterprise™ Integration with Relativity Collect Works

## Key Benefits of the X1 and Relativity Integration

### Immediate Visibility at the Endpoint

Gain instant visibility into the end-users data on the laptop or desktop before collection. Pre-collection visibility prevents the user from over collecting, allowing a more precise collection of only the data you need, saving both time and money.

### Dramatically Increased Speed to Review

Review and export collected data direct from RelativityOne within minutes and get instant insight into your data.

### Bypass Costly Processing and Manual Handoffs

With collection fully integrated into review, speed to review rapidly accelerates. The user's critical data goes directly from custodian desktop or laptop straight to a Relativity review instance. No more unexpected delays and cumbersome processes.

### Innovation and Fast Endpoint Technology

With X1's patented and proven search technology, you can rapidly search across thousands of distributed endpoints in minutes, with precision and accuracy. No more time wasted endlessly searching through unstructured data prior to collection.
