

# X1 Enterprise Collect for Microsoft 365

The industry's fastest and most comprehensive search and collection solution for MS 365

X1 Enterprise Collect, powered by X1's proprietary<sup>1</sup> index-in-place technology, is the only data discovery solution in the industry that enables you to perform **lightning-fast, federated, and highly targeted, custodian-based search and collection of both on-premise and cloud-based data sources** including the full MS 365 suite of Teams, OneDrive, SharePoint, Mail, as well as remote laptops, desktops and large network file-shares.

X1 has taken a completely unique and revolutionary approach to data discovery in MS 365 that industry analysts state **"even surpasses in many respects Microsoft's own Premium Purview services"**.<sup>2</sup>

Unlike X1, Microsoft relies upon a technology approach that Special Master Phillip Favro, appointed by a federal district court for *Deal Genius, LLC vs. O2Cool, LLC*, reported, **"Microsoft 365 has technological limitations that may not allow a responding party to generate reliable search results—as would typically be possible with an electronic discovery platform that has a fully indexed database and an advanced search engine"**.<sup>3</sup>

## X1's Superior Throughput Capabilities

X1 Enterprise Collect	vs.	MS Purview & Others
Index & Search 100's of Custodians Per Day		Index & Search 2-3 Custodians Per Day at 2 GB per Hour <sup>4</sup>

And while other 3<sup>rd</sup> party solutions simply integrate their "cloud connectors" via Microsoft's own Search and eDiscovery API's, which result in the same if not greater limitations in the fidelity of their search results and data throughput constraints, X1 has taken a completely different approach. Our direct integration, proprietary eDiscovery index-engine, index-data-in-place methodology, and advanced search and collection capabilities, bypass those restrictions to enable significantly faster and much more comprehensive MS 365 support.

Here are just some of the key advantages realized with X1 Enterprise Collect:

- **Unified and federated search across the enterprise**
- **True ECA insight at the point of collection**
- **Enhanced scalability and automation with no premium E5 license required**
- **Superior data throughput capabilities**
- **Advanced and automated MS Teams support**
- **Highly targeted collections eliminating overcollection**
- **and much more....**

X1's unique approach and proprietary technology enables organizations to reduce eDiscovery costs by 90% or more by avoiding overcollection and accelerating your data discovery process to get targeted, fully-defensible results in hours vs. weeks or months.

## X1 Enterprise Collect: The Direct Approach to Collect from MS 365

# X1 Enterprise Collect for Microsoft 365

Only X1 Enterprise Collect can fully unlock the following key capabilities and benefits:

Key Capabilities	X1	MS 365 & Cloud Connectors	X1 Differentiator
Unified search & collection of on-premise & cloud data sources	✓	✗	Includes all laptops, desktops, network file shares and MS365 and other cloud data sources
True ECA and processing capabilities at the point of collection	✓	✗	Assess, pre-process, and collect only what is needed at the point of collection
No premium Microsoft E5 license required	✓	✗	X1 offers full automation and scalability with the much lower cost E3 license
Significant data throughput capabilities	✓	✗	X1 can index and search 100's of custodians per day vs Purview which limits indexing to 2 GB/hr and restricts file sizes
Teams search by custodian and thread	✓	✗	No need to mass download entire Teams chats and channels, including collection and search of modern attachments in-place
All data remains in-place during search	✓	✗	Others repeatedly bulk download data for search
Collect straight to review	✓	✗	Eliminate processing via targeted collection directly to review
All data indexed in-place using X1 patented technology	✓	✗	Purpose-built eDiscovery index engine
Direct integration avoids limits of MS Discovery API	✓	✗	Others are limited by Microsoft Search & Discovery API integration
Supports unlimited and advanced/complex Boolean & keyword search parameters	✓	✗	MS 365 and others are limited and restricted in their search parameters
Targeted collection of ONLY relevant & responsive data	✓	✗	Avoids mass overcollection and excessive eDiscovery costs
Lightning-fast index, search, and collection	✓	✗	X1 enables collection of data in hours vs weeks or months
Index & search large, embedded & modern attachments	✓	✗	Microsoft limited to 150 GB or less and others omit these
Comprehensive & defensible including all Metadata	✓	✗	Other solutions ignore or omit critically required metadata

## Why X1 Enterprise Collect vs. Microsoft Purview or other 3<sup>rd</sup> party cloud connector solutions?

X1 is the only solution available that provides true index-in-place capabilities distributed throughout the enterprise, and in the form of a unified, simultaneous, and federated search and collection technology for all your data sources.

From an eDiscovery performance, time, and cost perspective, Microsoft Purview Premium's documentation reports 2GB per hour throughput limitations leading to the inability to address anything other than small matters in a timely manner, rendering it virtually unusable for day-to-day eDiscovery requirements and workflow. Because of X1's direct integration approach to MS 365 and proprietary technology which bypasses these constraints, only X1 can offer the throughput, scalability and fidelity required by corporate legal departments and the law firms and service providers who support them. Our clients inform us that for their eDiscovery, investigation, and information governance matters, X1 by far presents the best option at significantly less cost than full Purview premium licensing or platforms that are subject to the same performance constraints.

To learn more about unified search and collection across both on-prem and cloud data sources with the X1 Enterprise Collect platform solution including the full suite of MS 365 connectors, contact us at [sales@x1.com](mailto:sales@x1.com) to schedule a demo or visit [x1.com](http://x1.com).
